Subject : Feichthaler and the Runaway Copy Machine

Mr. Mayor

I pay \$25.00 for an ink cartridge that will print 4,000 pages. That is .00625 cents per sheet. The News Press article says paper at Office Depot is \$4.60 per ream. Mr. Mayor I'll do the math for you. You may be a fine attorney but you had better leave the math to Mr. Hair.

It may be helpful for you to enroll in one of our charter schools and take a course in arithmetic, Fourth or Fifth Grade should do it.

Here we go pay close attention now.

1,500 sheets \$4.60 per ream (500 sheets) times 3 = \$13.80. Paper Cost 1,500 sheets.

1,500 sheets printed at .00625 ea = \$9.38 for Toner

Total Cost = \$23.18.

The article quotes you as saying the total cost to Rosado should be \$0.15 per copy. Now that's a pretty hefty market.

Mr. Mayor do you pay 0.15 per copy ? If so I would like to see the receipts. And by the way while were on this subject how about the thousands of dollars wasted when Mr. Stewart sent his propaganda letter out a few months ago. I believe that was in excess of \$20,000.00. How much a copy was that ?

How can you exaggerate the cost to \$222.00 when it should be around \$23.18 and yet our city government tries to hide the cost of sewer and water and call it \$22,000.00 when the actual charge is over \$28,000.00 and in some cases in excess of \$50,000.00.

It's amazing how the city can check and determine the number of pages Mickey Rosado uses yet the city refused to bring in independent people to check out a \$103 million dollar contract signed with MWH. I think we have a problem with priorities here.
